

FIESTA[®]

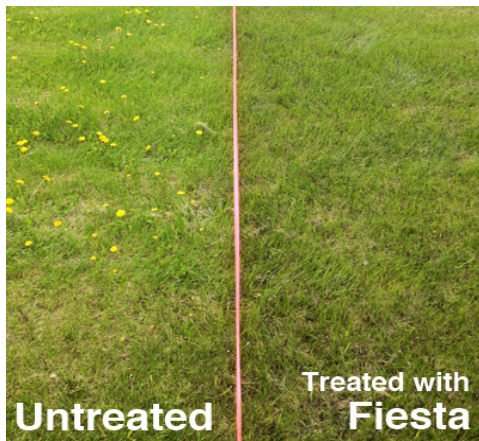

LAWN WEED KILLER

Harnesses the power of iron to deliver visible, same-day results, even in cool weather.

Fiesta Turf Weed Killer is a selective broadleaf herbicide for turf. Fiesta is unique in this category. It is the only effective, registered bio-herbicide alternative to conventional chemistries such as 2,4-D and similar products.

Broadleaf Weed Control

Fiesta controls or suppresses dandelion, white clover, moss, English Daisy and chickweed in in turf and lawns. Fiesta may be broadcast, and it is fully effective as a spot treatment. Fiesta is compliant with most public-sector restrictions and it is a solid foundation for a reduced-risk turf IPM program for all turf sites including homes, parks, schools, and sports turf.

Mode of Action

Iron is bound to a chelating agent, hydroxyethylene-diaminetriacetic acid (HEDTA), which keeps the iron soluble and readily available for plant uptake. Broadleaf weeds absorb Fiesta easily and in larger quantities than grass does, which leads to cellular damage and ultimate plant death in broadleaf weeds while grass remains unharmed.

Testimonial

Iron HEDTA is “an effective alternative to 2,4-D to control broadleaf weeds on home lawns, school grounds, and certain areas in golf courses.” PESPWire, Nov/Dec 2010

Active Ingredient

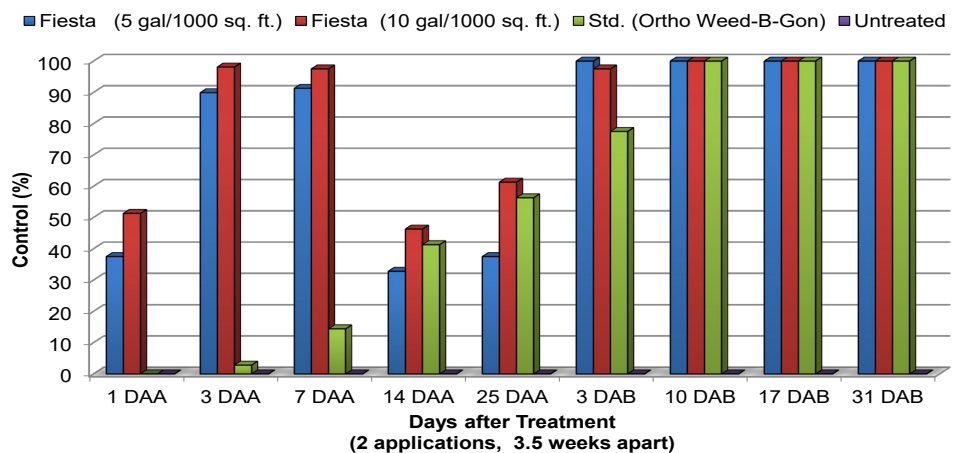

Iron HEDTA 26.52%

Features

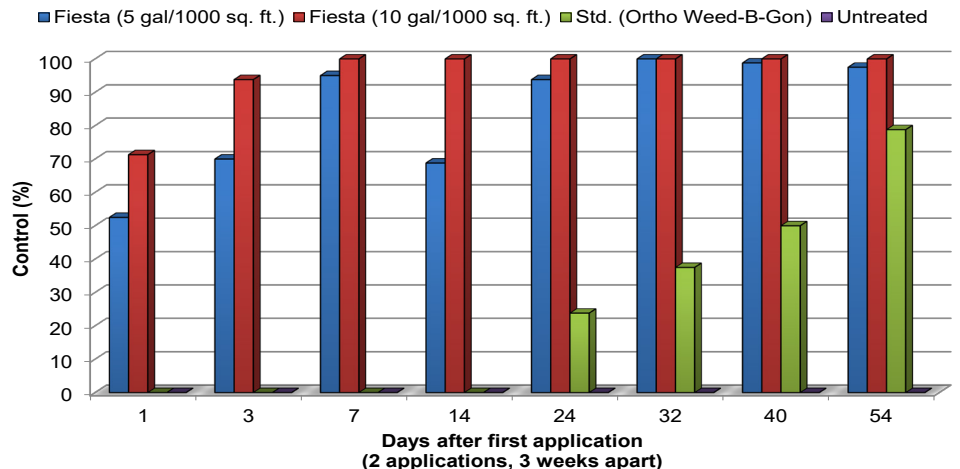

Fiesta is non-staining on hardscapes and has no odor. It is rain-fast in three hours and people and pets may re-enter the treated site as soon as the spray has dried. Unique among turf herbicides, Fiesta can be used on newly-germinated turf and treated turf may be over-seeded one day after application.

- The Only Effective, Registered Bio-herbicide for Turf
- Results in 24 Hours
- Effective in Cold Weather
- No Unpleasant Odor
- Rainfast in 3 Hours
- Safe for Newly-Germinated Turf
- Overseed in 24 Hours
- People and pets can enter treated area when spray has dried
- Patented Technology

Control of dandelion in turf (Forey, California, 2009)

Control of English daisy in turf (Uber, California, 2009)
